

**PIENAAR ENERGY (PTY) LTD**

# **Solar power generation using solar thermal energy**

## Overview

---

Concentrating solar-thermal power (CSP) systems use mirrors to reflect and concentrate sunlight onto receivers that collect solar energy and convert it to heat, which can then be used to produce electricity or stored for later use. It is used primarily in very large power plants. In most. Solar technologies convert sunlight into electrical energy either through photovoltaic (PV) panels or through mirrors that concentrate solar radiation. As of the end of 2024, global renewable power capacity reached 4,448 GW, with solar accounting for 1,865 GW.

## Solar power generation using solar thermal energy

### Solar explained Solar thermal power plants

Concentrating Solar Thermal Power Plants  
Linear Concentrating Systems  
Solar Power Towers  
Solar Dish-Engines  
There are three main types of concentrating solar thermal power systems: 1. Linear concentrating systems, which include parabolic troughs and linear Fresnel reflectors 2. Solar power towers 3. Solar dish/engine systems
