# **Solar street light battery connected to water pump**

## Overview

---

Are you wondering how to connect a solar panel to a water pump and battery?

Properly connecting these components is key to ensuring efficient and reliable operation. In this guide, I'll walk you through the essential steps and considerations for a successful setup. (Controller's Power light will blink) There is a PWM solar charge controller inside your pump controller that facilitates charging, prevents. Stan's solution was to use a relatively inexpensive 12 VDC Shurflo pump that is intended for spraying and RV applications. The pump draws about 8 amps, so, to drive it directly with PV panels would have required at least 100 watts of PV array, and perhaps a linear current booster for startup. This circuit appears to be a simple solar-powered system designed to drive a water pump.
