Solar system structure

Overview

Astronomers sometimes divide the Solar System structure into separate regions. The inner Solar System includes Mercury, Venus, Earth, Mars, and the bodies in the asteroid belt. The outer Solar System includes Jupiter, Saturn, Uranus, Neptune, and the bodies in the Kuiper belt. Since the discovery of the Kuiper belt, the outermost parts of the Solar System are considered a distinct region consisting of

Solar system structure

Exploring the Solar System: Formation, Structure, and the Search for

The solar system is organized into a complex architecture comprising the Sun, eight major planets, numerous dwarf planets, moons, and a variety of smaller celestial bodies.
