

**PIENAAR ENERGY (PTY) LTD**

# **Solar wind turbine base**

## Overview

---

The turbine features a diffuser that efficiently collects and accelerates wind, enabling high power output even at low speeds of around 3 m/s. According to SoftBank, the system's compact design makes it also suitable for deployment in remote islands and mountainous regions. SoftBank Group is piloting AI-controlled cellular base stations powered by solar panels and a 3 kW wind turbine to reduce energy use while maintaining service quality. This includes locations that are difficult to access such as remote island developments or events where the power is only required for a short space of time. It is the world's largest solar and wind power base project, developed by CTG in the Kubuqi Desert in Ordos, north China's Inner Mongolia Autonomous Region. Located in China's seventh largest desert, the project has a total installed capacity of 160 MW, including 80 MW of photovoltaic power, 40 MW. In 2000, the average land-based wind turbine had a hub height of 190 feet, a rotor diameter of 173 feet, and produced 900 kW of electricity. The project was built by CSCEC and other.
