

**PIENAAR ENERGY (PTY) LTD**

# **Specification for thickness of photovoltaic support pads**

## Overview

---

The thickness of a concrete pad is determined by its intended usage and the load it will support. A thickness of 4 inches is usually appropriate for residential uses like sidewalks and driveways. The concrete pad must be big enough to support the weight of solar photovoltaic (PV) energy systems. It includes the term, definitions and symbols compiled from safety, design, installation, and monitoring. Standards are norms or requirements that establish a basis for the common understanding and to resist each of the following conditions: 1. These functions are essential for modules to be safe for people working near them and for the structures to which they are attached and electrical code requirements of the jurisdictions. Adopt changing spacers to make multi sizes profiles sections.

## Specification for thickness of photovoltaic support pads

---

### Photovoltaic support pad specification standard

Structures with open grid framing and without a roof deck or sheathing supporting photovoltaic panel systems shall be designed to support the uniform and concentrated roof live loads specified in ...
