

PIENAAR ENERGY (PTY) LTD

Sudan peak shaving

Overview

With peak shaving, a consumer reduces power consumption ("load shedding") quickly and for a short period of time to avoid a spike in consumption. By using Kisen Energy's Digital Cloud + Optical Storage and Charging Integration Solution, the above problems can be effectively solved, operational efficiency can be improved, management costs can be reduced, carbon emissions can be lowered, and green and sustainable development can be achieved. But what about the rest of the year when the steam generators, boilers, feed and blowdown tanks, etc. you use for sterilization and/or blanching are just sitting around quietly depreciating?

Chances are, when your usage is seasonal, you're better off renting than owning. Every setup is different. This white paper explores peak shaving as an effective method to minimize energy costs. These plants serve as essential tools in stabilizing gas supply and ensuring that demand fluctuations do not lead to shortages or excessive costs. Below are key factors to consider.

Sudan peak shaving

Peak shaving

Peak shaving is critical in supporting more sustain-able electrification while managing costs. BESS is one of the most effective ways to achieve a sus-tainable future.
