# Technical specifications adopted by microgrids

**12.8V 100Ah**

## Overview

---

This part of IEC 62898 defines the guidelines for the general planning and design of microgrids, IEC TS 62898-2 defines the general technical requirements for operation and control of microgrids, IEC TS 62898-3-1 defines the technical requirements for protection and dynamic control. This part of IEC 62898 defines the guidelines for the general planning and design of microgrids, IEC TS 62898-2 defines the general technical requirements for operation and control of microgrids, IEC TS 62898-3-1 defines the technical requirements for protection and dynamic control. Authorized by Section 40101(d) of the Bipartisan Infrastructure Law (BIL), the Grid Resilience State and Tribal Formula Grants program is designed to strengthen and modernize America's power grid against wildfires, extreme weather, and other natural disasters that are exacerbated by the climate. The purpose of this Community Microgrid Technical Best Practices Guide (Guide) is to provide information to help development teams understand the key technical concepts and approved means and methods for deploying multi-customer Community Microgrids (CMGs) on Pacific Gas & Electric's (PG&E). The International Electrotechnical Commission (IEC) is the leading global organization that prepares and publishes International Standards for all electrical, electronic and related technologies. The technical content of IEC publications is kept under constant review by the IEC. Please make sure. IEC TS 62898-3-2:2024 provides technical requirements for the operation of energy management systems of microgrids. This document describes specific recommendations for low-voltage (LV) and medium-voltage (MV) systems. Coalition stakeholders include the City of Oakridge, South Willamette Solutions, Lane County, Oakridge Westfir Area Chamber of Commerce, Good Company/Parametrix, Oakridge Trails. This is a one-way delivery system from generation to usage. This model is increasingly complemented by bi-directional small distributed energy resources (DER) which are situated very close to the end-user.
