

## PIENAAR ENERGY (PTY) LTD

# The bigger the photovoltaic panel the greater the power

**Efficient  
Higher Revenue**

- Max. Efficiency 97.5%
- Max. PV Input Voltage 600V
- 150% Peak Output Power
- 2 MPP Trackers, 150% DC Input Oversizing
- Max. PV Input Current 16A, Compatible with High Power Modules

**Intelligent  
Simple O&M**

- IP66 Protection Degree: support outdoor installation
- Smart I-V Curve Diagnosis Function: locate PV string faults accurately and automatically detect faults
- DC & AC Type II SPD: prevent lightning damage
- Battery Reverse Connection Protection

**Flexible  
Abundant Configuration**

- Plug & Play, EPS Switching Under 10ms
- Compatible with Lead-acid and Lithium Batteries
- Max. 6 units Inverters Parallel
- AFCI Function (Optional): when an arc-fault is detected the inverter immediately stops operation

## Overview

---

Overall bigger solar panels are better for power, though there may be other disadvantages. To have a solar panel which can produce a large number of watts, it has to be bigger as it will need more face space to attract the sunlight to the. Since 2020, the race to develop the world's most powerful solar panel has escalated rapidly, driven by breakthroughs in cell architecture, the transition to larger N-Type cell formats, and multi-busbar and gapless interconnect designs. What began with Trina Solar 's 600W module debut in 2020. It's easy to assume that larger panels produce more energy, but there's more to it than just surface area. The relationship between size and energy output is influenced by several factors that can make a big difference in efficiency. Because there is more than one way to measure the size of a solar panel – it could, for example, be measured in the power rating, with some solar panels having a higher power. The most common solar panel sizes are 60-cell, 72-cell and 96-cell, with the 60-cell panels used for residential buildings while the 72-cell panels are considered commercial solar panels.

## Are Bigger Solar Panels Better?

Bigger panels can produce more electricity per unit, reducing the total number of panels needed. This minimizes installation time and costs, particularly for large systems.
