# **The chaotic phenomenon of wind and solar complementarity in communication base stations**

## Overview

---

Highlights: • The paper offers a global analysis of complementarity between wind and solar energy. • Complementarity is examined regarding PV panel inclination and storage. The wind-solar hybrid power system is a high performance-to-price ratio power supply system by using wind and solar energy complementarity. A review on the complementarity between grid-connected solar o The paper proposes complementarity analysis of wind and solar. Understanding the spatiotemporal complementarity of wind and solar power generation and their combined capability to meet the demand of electricity is a crucial step towards increasing their share in power systems without neglecting neither the security of supply nor the overall cost efficiency of. Integrating the complementarity of wind and solar energy into power system planning and operation can facilitate the utilization of renewable energy and reduce the demand for power system flexibility [5, 6]. How can a complementary development of wind and photovoltaic energy help?

The complementary. What is the complementary coefficient between wind power stations and photovoltaic stations?

Utilizing the clustering outcomes, we computed the complementary coefficient  $R$  between the wind speed of wind power stations and the radiation of photovoltaic stations, resulting in the following. The complementary development of wind and photovoltaic energy can enhance the integration of variable renewables into the future energy structure.
