# The combination of photovoltaic and energy storage

## Overview

---

For solar-plus-storage—the pairing of solar photovoltaic (PV) and energy storage technologies—NLR researchers study and quantify the economic and grid impacts of distributed and utility-scale systems. Much of NLR's current energy storage research is informing solar-plus-storage. The AES Lawai Solar Project in Kauai, Hawaii has a 100 megawatt-hour battery energy storage system paired with a solar photovoltaic system. Sometimes two is better than one. Energy storage systems, on the other hand, store excess energy for later use, addressing the intermittent nature of renewable energy sources like solar power.

### Solar Integration: Solar Energy and Storage Basics

But the storage technologies most frequently coupled with solar power plants are electrochemical storage (batteries) with PV plants and thermal storage (fluids) with CSP plants.
