

**PIENAAR ENERGY (PTY) LTD**

# **The difference between JinkoSolar photovoltaic panels and ab grades**

## Overview

---

The core differences lie in three indicators: efficiency fluctuation value, EL imaging grade, and minority carrier lifetime. Taking the most common P-type monocrystalline as an example, Grade A modules require an efficiency standard deviation of  $<0.3\%$ , and EL imaging must reach Class 1. And once you've figured out what kind of solar panels, made of which material, you need to decide what grade to get. There's a lot to consider and figure. From 2020 Jinko's focus on the Tiger module means adopting the advanced technology of multi-busbar + Tiling Ribbon + half cut with the high-efficiency Jinko cell. There are 4 sub-series for Tiger modules that include: Max. This tech features a special round busbar, allowing more cells to be packed onto a single panel. Grade A panels, for instance, are the highest quality, while Grade D panels are typically considered low-grade materials with limited usability.

**Product Model**  
 HJ-ESS-215A(100KW/215KWh)  
 HJ-ESS-115A(50KW/115KWh)

**Dimensions**  
 1600\*1280\*2200mm  
 1600\*1200\*2000mm

**Rated Battery Capacity**  
 215KWH/115KWH

**Battery Cooling Method**  
 Air Cooled/Liquid Cooled

## Which type of Jinko Solar modules should you choose? , Solarity

The main difference between P-type and N-type solar cells is the number of electrons. A P-type cell usually dopes its silicon wafer with boron, which has one less electron than silicon (making the cell ...
