# The installation height of photovoltaic brackets is different

BMS Wiring Diagram

## Overview

---

Solar panels should be mounted at a height of 3.25" from the roof's surface to ensure optimal performance. This measurement takes into account the seam of the SSMR, typically 1.5" to 3" in height, the mounting hardware, adding approximately  $\frac{3}{4}$ " and the module frame. The installation height of a photovoltaic bracket is a critical factor that significantly impacts the performance, efficiency, and overall viability of a solar power system. They are mainly categorized into two, they are pitched and flat roof solar panel. Solar panel mounting brackets connect solar panels to their installation areas, whether on rooftops, ground mounts, or poles for stability. Residential, commercial, and agricultural settings all have distinct requirements.
