The order of plugging in the solar inverter

Overview

The order of the connections is the most important step. Before you start, cover your solar panels or turn them away from direct sunlight. This stops them from generating power while you work. Plug in RV, turn on battery, turn on inverter, wait for inverter to start, turn on PV. That's why we usually connect solar panels to the charge controller which is wired to the battery and the battery is then connected to an. The images contained in this document are for illustrative purposes only and may vary depending on product models. Mount the power optimizers in a shaded location near the PV modules, on the structure or racking to which the module is attached, using the mounting holes.
