

PIENAAR ENERGY (PTY) LTD

The photovoltaic panel can be shielded on the east side

Overview

Yes, solar panels can work on an east-facing roof. While this orientation might not be the 'textbook' choice like south-facing panels, it's still an excellent option for homeowners who don't have south-facing roofs. South-facing solar panels, which receive the most sunlight throughout the day, are considered the ideal in the northern hemisphere - but that doesn't mean you can't install solar panels on an east-facing or west-facing roof. This article explains how solar panels on an east-facing roof perform, design strategies to maximize energy yield, cost and incentive. While south-facing roofs are considered optimal for solar panel installations, it is still possible to install them on an east facing roof, albeit with slightly lower energy production potential. Of course, the sun rises in the east, travels across the south, and eventually sets in the west. This means that from sunrise to midday (not counting during daylight savings time) and from midday to sunset, there is an equal number of hours of sunlight on one particular location.

The photovoltaic panel can be shielded on the east side

Our Lifepo4 batteries can be connected in parallels and in series for larger capacity and voltage.

Will Solar Panels Work On An East-Facing Roof?

However, when your south-facing roof isn't usable, you can install panels on the east-facing roofs. While the east-facing solar panels may not generate as much energy as those facing ...
