

## PIENAAR ENERGY (PTY) LTD

**The valve cannot be turned to generate solar power**

## Overview

---

If a solar valve refuses to turn, the first step is to isolate the issue through systematic troubleshooting. Begin by checking for mechanical blockages; these can often be resolved with cleaning. These obstructions can originate. These valves can be operated manually or automated using a 24VAC valve actuator connected to a pool automation or solar control system. Although originally developed by Jandy Industries, this valve-and-actuator design has been adopted by Pentair and Hayward, making actuators and valves. The use of solar power in industrial and municipal valve actuator applications goes back several decades; however, technological advances in solar power efficiency and storage mean that today, it has become a practical, dependable alternative for many isolated locations. In reviewing energy requirements first, a typical remote valve actuator site will have some sort of communication, whether it's licensed radio, cellular. This is the first in a two-part series exploring the selection of valves in solar power applications.

### Solar & UPS Power for Remote Valve Actuator Applications

Out in the middle of nowhere, line power can be less than dependable, costly to install on site, or is simply not available. Solar powered systems and line powered UPS systems can provide both the power and reliability ...

## Why can't the solar valve be turned?

One of the most common reasons for a solar valve's inability to turn is mechanical blockages. These obstructions can originate from debris accumulation, corrosion, or internal component failures that ...
