## Uninterruptible power supply is an inverter

---

### Inverters vs. UPS

Unlike inverters, UPS systems are designed to bridge the gap between a power outage and the activation of a backup power source, such as a generator or an inverter.

### UPS or Inverter: Which Do You Need?

Inverters and uninterruptible power supply (UPS) units can both produce AC power from DC sources, and they are often confused for this reason. However, a UPS is a more sophisticated device with ...

## What's the Difference Between

## Inverter and UPS?

UPS and inverter are both the devices used to support power supplies in the event of power outage. This post introduces the UPS vs inverter difference and the situations to choose a UPS or an inverter.

## The difference between a UPS and an Inverter?

An inverter does not generate or store power, but it can be connected to power sources to support power supplies. Inverters are one of the major components within an uninterruptible power supply.

## Difference between Inverter & UPS

A UPS can be used as an inverter while an inverter can't be used as a UPS. To use a UPS as inverter, simply don't connect the input supply voltage (120V in US and 230V in EU) to the UPS.
