Unsubsidized photovoltaic energy storage

PUSUNG-R (Fit for 19 inch cabinet)

Overview

The LCOE for utility-scale solar-plus-storage systems in 2025 was between \$50/MWh and \$131/MWh on an unsubsidized basis. This range represents a significant improvement over 2024, primarily due to declining battery prices and enhanced integration efficiency. This paper presents average values of levelized costs for new generation resources as represented in the National Energy Modeling System (NEMS) for our Annual Energy Outlook 2025 (AEO2025) Reference case. The estimates include only resources owned by the electric power sector, not those owned in. itive form of generation. This is particularly true in the current high power demand environment, where renewables stand out as both the lowest-cost and quickest-to- s not a forecasting. Lazard's analysis of levelized cost of electricity across fuel types finds that new-build utility-scale solar, even without subsidy, is less costly than new build natural gas, and competes with already-operating gas plants. Sometimes two is better than one.

Unsubsidized photovoltaic energy storage

Lazard Report Finds Continued Declines In Renewable Generation ...

The low-end unsubsidized levelized cost of energy for solar photovoltaic and onshore wind generation paired with energy storage, at \$46 and \$42 per megawatt hour, respectively, was ...
