Vientiane load shifting

Overview

The persistent haze over Vientiane, a familiar sight for decades, now carries a new, subtly unsettling element: a significant shift in Lao economic priorities, driven by a resource-backed strategy that fundamentally alters the region's geopolitical landscape. and policy implications. Klein, Herkel [7] analyzed the cumu ?

d to flat-rate tariffs. For utilities, the implementation of dynamic pricing can potentially increase month lifting power landscape. This policy brief is part of a series developed by Laotian analysts during an OSeMOSYS (an open source modelling tool) modelling workshop in Vientiane, Lao PDR, in October 2024. There are four policy briefs in total, each addressing a question pertinent to the expansion of the Laotia electricity sector. During load shedding, electricity providers temporarily cut off power to certain areas or sectors to reduce the overall load on the electrical grid. Load-shifting at the appliance level is an interesting topic to review, since appliance usage is one of the main inputs of

the load-profile analysis.
