

# Water cup powered by solar energy

## Overview

---

A new sponge-like material uses sunlight to harvest water from air, offering an efficient, low-cost solution for water scarcity. Engineers from Australia and China have developed a sponge-like device that captures moisture from the air and releases it into a cup using solar. With nine sponge cubes, each weighing 0.8 grams, 15 milliliters of water can be absorbed from the atmosphere. Credit: Shu Shu Zheng/RMIT University. The spongy material, known as WLG-15, also. Price and other details may vary based on product size and color. Portable Solar Water Heater for Outdoor Camping, Hiking, Emergency Boiling, Survival Gear, Eco-Friendly Solar Powered Thermos Bottle Need help?

. San Francisco-based startup Aquaria Technologies is developing a technology that pulls clean, affordable drinking water out of thin air.
