

**PIENAAR ENERGY (PTY) LTD**

# **Weight of hot dip galvanized photovoltaic bracket**

## Overview

---

For a 1MW photovoltaic project, the weight of hot-dip galvanized brackets generally ranges from 20 to 30 tons, but the actual figure varies significantly due to key factors: 1. Specifications and weight of galvan fixing solar panels in solar photovoltaic power generation systems. The general materials are aluminum alloy, carbon steel and stainless steel. The related products of the solar support system are made of carbon steel and stainless taic mounting system is. SteelPRO Group is a manufacturer of high-quality galvanized steel photovoltaic racking, providing reliable, durable and efficient photovoltaic support solutions tailored to your needs. They come in various types depending on the mounting surface (roof,ground,pole,etc).

## Weight of hot dip galvanized photovoltaic bracket

---

### **For a 1MW photovoltaic project, the weight of hot-dip galvanized**

PV Module Dimensions & Layout: Larger modules (e.g., 500W+ large-area panels) or dense ground-mounted layouts often require stronger, more numerous brackets, pushing weights toward 30+ tons.
