

**PIENAAR ENERGY (PTY) LTD**

# **What are the photovoltaic bending board equipment**

## Overview

---

Supports automatic lead bending, high-temperature tape or cloth application, and backsheet barcode labeling. Compatible with various module sizes, allowing quick changeover and precise positioning. Three-lead simultaneous operation with a flexible contact design enhances both. The eXpert 5952 Solar Panel Testing System is a floor-standing fatigue system that employs a brushless rotary motor with rugged roller screw design for higher force and longer stroke applications. All of ADMET's dynamic fatigue testing systems are equipped with the MTESTQuattro high-speed. The invention relates to a welding strip bending device for a photovoltaic panel, wherein a material taking mechanism, a material moving mechanism, a turnover mechanism, a feeding mechanism, a calibration mechanism and a bending mechanism realize full-automatic operation of bending the photovoltaic. The ECOCUT & BEND is an automatic ribbon cutting and bending machine developed to support bussing in PV panel production. Shanghai BigEye Technology Co.,LTD has a professional design team focused on electroluminescence testers for photovoltaic cell defect testing, which is located in Suzhou, China. It. The machine is developed in order to meet the requirement of customers for the once forming of interconnector cutting and bending (small 'Z' type).

## What are the photovoltaic bending board equipment

---

### ICB Lead Bending

Supports automatic lead bending, high-temperature tape or cloth application, and backsheet barcode labeling. Compatible with various module sizes, allowing quick changeover and precise positioning. ...
