

**PIENAAR ENERGY (PTY) LTD**

# **What battery should be connected to the solar panel**

## Overview

---

A basic solar battery setup includes several essential parts: solar panels (which capture energy from the sun), a battery (such as lead-acid, lithium-ion, or LiFePO<sub>4</sub>, which stores the energy), a charge controller to regulate the power flow, and optionally an inverter to convert. A basic solar battery setup includes several essential parts: solar panels (which capture energy from the sun), a battery (such as lead-acid, lithium-ion, or LiFePO<sub>4</sub>, which stores the energy), a charge controller to regulate the power flow, and optionally an inverter to convert. Connection sequence is critical for equipment safety - Always connect batteries to charge controllers before solar panels. This prevents controller damage and ensures proper system voltage detection, as charge controllers use battery voltage as their reference point. This setup helps reduce self-discharge. This allows the battery to charge using the on-load current produced by the solar. If you're looking to maximize your solar investment, connecting your solar panel to a battery is a smart move. It allows you to use solar energy even when the sun isn't shining, giving you more control over your power supply.

## What battery should be connected to the solar panel

---

### How to connect solar panels to battery bank, charge controller and

A charge controller acts as a safety barrier between panels and a battery and should be a part of every home solar panel installation. In this article, we'll explain how to wire together solar ...
