The Science Behind Wind Blades and How They Work

How Wind Blades WorkTypes of Wind BladesDesigning Wind BladesMaintenance of Wind BladesFAQFinal ThoughtsWind turbine blades transform the wind's kinetic energy into rotational energy, which is then used to produce power. The fundamental mechanicsof wind turbines is straightforward: as the wind moves

across the surface of the blade, it causes a difference in air pressure, with reduced pressure on the side facing the wind and greater pressure on the top. See more on [therenewablerundown](#) [wiredsync](#)
