

PIENAAR ENERGY (PTY) LTD

**Whether the generator fan is
blowing in or out**

Overview

Air cooling uses fans to blow air over the generator's engine. This method moves heat away quickly and keeps the engine temperature stable. Will I run into issues with air blowing out the side of the bus while driving down the road?

My previous. Never run a generator in a garage, shed, or near open windows. Keep it at least 20 feet from your home, with the exhaust pointing away from living areas, people, and pets. In this article, we'll explain why ventilation matters, how to position your generator safely, and what signs to watch for if. If your generator is expected to be in temperatures lower than -20 o F (-29 o C) consult the generator sets factory, a cold weather package may be required. Generators produce harmful fumes, including carbon monoxide, which can be deadly. Proper. The function of the fan of the diesel generator set is to increase the flow rate of the air flowing through the core of the radiator and improve the heat dissipation capacity of the radiator.

Whether the generator fan is blowing in or out

Air flow requirements for enclosure , Power Equipment Forum

Having a STRAIGHT flow of air over the engine, then over the generator head and flowing the exhaust gases out through the exhaust fan is the correct, well proven solution.
