Which color looks good on the back of the photovoltaic panel

Overview

The solar industry uses black as a shorthand to indicate the panel's backsheet is color matched with the solar cells. These panels also have an all black frame. Outside of very niche applications where solar cells and panels can actually be tinted specific colors (usually with a significant hit to efficiency), solar panels typically come in three basic designs: white, black, and transparent (aka bifacial). Darker colors absorb more light and convert it to electricity, while lighter colors reflect more light and waste some of the energy. Black, blue, gray, even semi-transparent. each color tells a story. So, the color of. Solar panels are not just energy-generating workhorses—they're also the roof jewelry of your home. White Backsheets: These classic beauties flaunt a grid-like appearance, thanks to their white reflective layer.
