

**PIENAAR ENERGY (PTY) LTD**

# **Which month is the peak season for solar inverters**

**100-430KWH**

**230|400V**

## Overview

---

During peak summer months (July to August), your solar panels will typically produce the most energy. As we move into the colder seasons, production can decrease by 40-60%, especially in areas that see more cloudy days. There are a few factors that lead us to this conclusion, which can be surprising if you're less acquainted with how solar panels work. Though solar is effective throughout the whole year, there are some changes based on the season that we would like to make you aware of in this article. **How Do Seasonal Changes Affect Sunlight Intake For Your Solar Panels?**

There are a variety of small ways in which the given season can affect how. Solar panels generate electricity year-round, but their output varies dramatically between seasons. An error occurred while retrieving sharing information. Spring and autumn offer a balanced solar output — not as high as summer, but often more efficient in terms of panel performance. Cooler temperatures mean less heat loss in the system, and sunny days can still be frequent.
