Why do photovoltaic panels keep rising in price

Overview

Wood Mackenzie's October 2025 analysis confirms that PV module prices are jumping approximately 9% in Q4 2025, with further increases expected through 2026. It represents a structural market correction that will reshape solar procurement strategies. Somewhere in the tumult of the global economy in recent months, solar panel prices hit bottom and then began to rise. In a new weekly update for pv magazine, OPIS, a Dow Jones company, provides a quick look at the main price trends in the global PV industry. : The spot price assessment for TOPCon over 600 W modules DDP US remained at \$0.267/W as per the July 22 report, with quotes for. Solar panels can cut your electricity costs by 70% or more. Most systems cost at least \$10,000 to \$30,000. This shift is influenced by various factors, including international market dynamics and domestic policy changes. To protect margins, lock in pricing early, diversify suppliers, and adopt high-efficiency HPBC and ABC modules. The cost breakdowns show.
