

PIENAAR ENERGY (PTY) LTD

Why doesn't Europe produce photovoltaic panels

Overview

EU manufacturers of solar panels are swiftly going out of business, as cheaper Chinese imports outcompete them. The European solar industry is collapsing despite the EU's energy transition and expensive efforts to promote solar energy, says industry association SolarPower Europe. This. The value chain of crystalline silicon photovoltaic module manufacture, from silicon to wafers to cells and modules, shows the share of production in different countries (comparing the years 2010 and 2021). In 2023, the EU installed over 56 GW of solar – almost three times as much as was installed in 2020.
