Wind turbine transmission system structure

Overview

A gearbox is a mechanical system designed to adjust rotational speed and torque from the rotor to the generator. Wind turbines work on a simple principle: instead of using electricity to make wind—like a fan— wind turbines use wind to make electricity. Wind flow. A wind turbine turns wind energy into electricity using the aerodynamic force from the rotor blades, which work like an airplane wing or helicopter rotor blade. The difference in air pressure across the two sides. Part 3 of the Wind Energy Components Series - Understanding how the gearbox and drive train convert rotor motion into efficient electrical power Wind Turbine Gearbox and Drive Train - Core mechanical system linking rotor torque to generator output (Part 3 of Wind Energy Components Series). Designing a reduced-scale WTGTS to predict dynamic characteristics of the large-size prototype is a potentially feasible approach.

How Wind Turbine Works: Structure, Types, and Efficiency

Wind turbines convert the kinetic energy of wind into electricity through a simple three-step process: Blade Rotation: Wind strikes the aerodynamic blades, causing them to spin. Speed ...

The transmission characteristic for the improved wind turbine gearbox

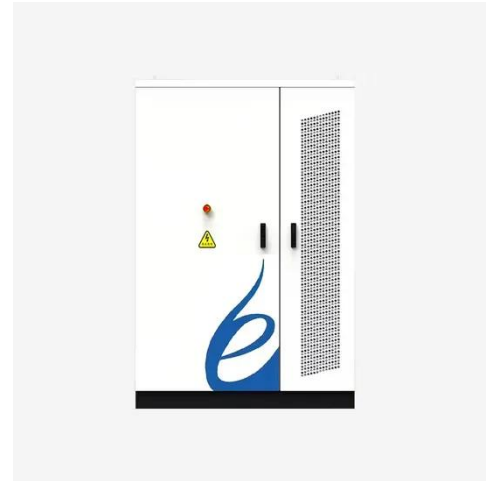

An improved transmission structure of the wind turbine gearbox is presented for the low-wind speed areas, based on the optimized P - v curve of the variable-speed double-fed wind turbine.

How a Wind Turbine Works

Wind turbines work on a simple principle: instead of using electricity to make wind--like a fan-- wind turbines use wind to make electricity. Wind turns the propeller-like blades of a turbine around a rotor, ...

Wind Turbine Gearbox Technologies

The majority of gearboxes at the 1.5 MW rated power range of wind turbines use a one- or two-stage planetary gearing system, sometimes referred to as an epicyclic gearing system.

How a Wind Turbine Works

The rotor connects to the generator, either directly (if it's a direct drive turbine) or through a shaft and a series of gears (a gearbox) that speed up the rotation and allow for a physically smaller generator. ...
