

**PIENAAR ENERGY (PTY) LTD**

# **Yun Gao New Energy Flywheel Energy Storage**

## Overview

---

YunGao New Energy's flywheel systems store energy kinetically—spinning a rotor at up to 50,000 RPM in a vacuum chamber. When the grid needs power, this rotational energy converts back to electricity through electromagnetic induction. When energy is extracted from the system, the flywheel's rotational speed is reduced as a consequence of the principle of conservation of energy; adding energy to the. Flywheel Energy Storage Systems (FESS) rely on a mechanical working principle: An electric motor is used to spin a rotor of high inertia up to 20,000-50,000 rpm. It can form a hybrid energy storage system with lithium batteries, complement each other's advantages, and jointly suppress the fl.

## Yun Gao New Energy Flywheel Energy Storage

---

### Flywheel energy storage

First-generation flywheel energy-storage systems use a large steel flywheel rotating on mechanical bearings. Newer systems use carbon-fiber composite rotors that have a higher tensile strength than ...

A typical system consists of a flywheel supported by rolling-element bearing connected to a motor-generator. The flywheel and sometimes motor-generator may be enclosed in a vacuum chamber to reduce friction and energy loss. First-generation flywheel energy-storage systems use a large steel flywheel rotating on mechanical bearings. Newer systems use carbon-

fiber composite rotors that have a hi...
